Learn all about polar bears, and view spectacular photographs revealing the mysterious lives of these magnificent and fascinating animals.

A wildlife photographer, naturalist, and writer, Jenny recently spent nearly three months in the arctic capturing extraordinary images of polar bears and working with renowned scientists who are studying them.

She will present more than 140 photographs of her close encounters with the great white bears in their remote habitat, and she'll discuss many issues relating to polar bear biology, ecology, behavior and conservation.
